

About ECP

Manual certification process puts a significant constraint on CEMILAC officers and individuals overall for meeting compliance requirements. It is with this view and a strong desire to provide effective, transparent compliance service to the stakeholders that CEMILAC has decided to start by WEB PORTAL. The objective here is to Enable Digital Interactions between RCMA and Directorates and not as a single entity. For example, the RCMA deals independently as a separate entity. CEMILAC web portal envisages that the platform allows stakeholders to access all service holistically as a single window, rather than accessing services through multiple windows, as is the current practice. In this regard, it is envisaged that stakeholders, for any services, view CEMILAC as a single entity rather than multiple RCMA. CEMILAC web portal envisages that a single stakeholder has a single identity which allows for sharing of status across RCMA and there on reducing redundancies in the information required from stakeholders which will significantly reduce the cost and time overheads on the Projects. A basic workflow has been depicted below.
